

YASOWANT NAYAK

Full Stack Engineer — React, Node.js & Real-Time Systems

Bangalore, India • yasowant1998@gmail.com • +91 63634 96221

linkedin.com/in/yasowant-nayak • github.com/Yasowant • yasowantdev.info

PROFESSIONAL SUMMARY

Full Stack Engineer with 3 years of production experience building responsive React and TypeScript interfaces and the Node.js services behind them for a multi-tenant SaaS platform serving 8+ enterprise customers. Strong across real-time, event-driven systems (WebSockets / Socket.IO, Apache Kafka), REST, GraphQL and SOAP integration, authentication, and production LLM integration, including agentic AI with tool calling. Owns features end to end — UI performance, responsive and cross-browser behaviour, API design, caching, testing, and CI/CD. Ships and operates three live products outside of work (prep.esscentra.in, smaartqr.com, node-auth-fe.vercel.app), mentors junior developers, and works in an Agile / Scrum team.

TECHNICAL SKILLS

Frontend: React.js (hooks, memoization, code-splitting, lazy loading), Next.js, TypeScript, JavaScript (ES6+), HTML5, CSS3, Redux, Context API, React Query, Tailwind CSS, responsive design, cross-browser compatibility, web performance optimization

Data Visualization: Recharts, analytics dashboards, charting and reporting UI

Backend & APIs: Node.js, Express.js, RESTful APIs, GraphQL, SOAP, OpenAPI / Swagger, asynchronous data handling, WebSockets, Socket.IO, microservices

Event-Driven & Messaging: Apache Kafka (topics, partitions, producers, consumers, consumer groups, offsets), event-driven architecture, message queues, asynchronous job processing, retry and idempotency handling

Auth & Security: JWT, rotating refresh tokens, RBAC, CSRF protection, multi-tenant data isolation, request validation, rate limiting

AI & LLM Integration: OpenAI API, Anthropic Claude API, agentic AI (agent loops, tool / function calling, human-in-the-loop), prompt engineering, structured JSON-mode output, document/vision parsing, fallback and reliability design

Databases & Caching: MongoDB (aggregation pipelines), MySQL, PostgreSQL, Redis, indexing & sharding

Cloud & DevOps: AWS (EC2, S3, IAM), Docker, Docker Compose, GitHub Actions, CI/CD pipelines, Vercel, Render

Testing: Jest, Supertest, React Testing Library, Postman, unit & integration testing

Practices: System design (caching, load balancing, rate limiting, fault tolerance, multi-tenancy), Agile / Scrum, code review, Git, GitHub, JIRA

WORK EXPERIENCE

Full Stack Developer

Aug 2023 – Present • 3 yrs

SPM Global Technologies — Bangalore, India

- Build and own React / TypeScript interfaces for a multi-tenant SaaS platform used by 8+ enterprise customers, including a reusable component library now shared across product teams, with responsive layouts verified for cross-browser compatibility across Chrome, Firefox, Safari, and Edge.
- Brought page load times down roughly 40% through code-splitting, lazy loading, memoization, and bundle analysis, and removed unnecessary re-renders on the highest-traffic screens.
- Own the Node.js / Express services behind those interfaces — RESTful APIs with JWT authentication, role-based access control, and per-tenant data isolation.
- Designed and maintain 15+ integration endpoints across REST, SOAP, and GraphQL connecting internal systems and third-party providers, including request validation, retries, and rate limiting.
- Built real-time notification and data-sync features on WebSockets / Socket.IO, handling reconnection, event fan-out, and state consistency across concurrently connected clients.
- Reduced average query response time by roughly 30% by reworking MongoDB and MySQL schemas, adding compound indexes, and introducing Redis caching on the hottest read paths.
- Moved the team from manual deployments to automated CI/CD with GitHub Actions and Docker, cutting release time roughly in half.
- Raised test coverage on critical modules to 80%+ using Jest, React Testing Library, and Postman API suites; mentor two junior developers and review most backend pull requests.

PROJECTS (LIVE IN PRODUCTION)

WorkWise — Job Board with Agentic AI Assistant

Sep 2026 – Present

Node.js, Express.js, MongoDB, Redis, Apache Kafka, React, Anthropic Claude API, Jest, Docker — live at [node-auth-fe.vercel.app](#)

- Built and deployed a full-stack job board with candidate, recruiter, and admin experiences, secured with JWT access/refresh cookies, token-version revocation, CSRF double-submit protection, RBAC, and rate limiting, and documented with OpenAPI / Swagger.
- Built an agentic AI job assistant on the Claude API: an agent loop in which the model calls server-side tools (job search, job details, the user's applications) against MongoDB, with a human-in-the-loop step so the agent only proposes applications and the user confirms.
- Hardened the agent with per-user rate limiting, a step limit per request, prompt-injection-safe input handling, user identity taken from the verified JWT (never from the model), and automatic fallback to backup models on overload.
- Published application events to Apache Kafka with a consumer group that turns status changes into in-app notifications, designed so requests never fail when the broker is down; added Redis caching and an indexed MongoDB search query planner.
- Wrote Jest + Supertest integration tests on an in-memory MongoDB and set up GitHub Actions CI/CD (lint, tests, Docker smoke test) with a health-checked deploy to Render; frontend on Vercel.

Esscentra Prep — AI Interview & Exam Prep Planner

Jul 2026 – Present

Node.js, Express.js, MongoDB, React, TypeScript, Vite, JWT, OpenAI API, Apache Kafka, node-cron — live at [prep.esscentra.in](#)

- Built and operate a full-stack, AI-powered planner that turns a resume or exam goal into a personalized day-by-day study plan scheduled around each user's real availability.
- Engineered the LLM layer on the OpenAI API — prompt design, structured JSON-mode output, PDF/vision document parsing, and deterministic template fallbacks so plan generation never fails for the user.
- Introduced Apache Kafka to take plan generation, email, and reminder work off the request path — producers publish per-user events to dedicated topics and consumer groups process them asynchronously, with retry handling and idempotent consumers so a replayed event never duplicates a plan or a notification.
- Implemented JWT with rotating refresh tokens, plan-based access gating, tiered subscriptions with a 7-day trial, and scheduled email and desktop reminders via node-cron.

Survey SaaS Platform — Multi-Tenant Survey Builder & Analytics

Apr 2026 – Jun 2026

Node.js, Express.js, MongoDB, React, TypeScript, TanStack Router, React Query, JWT, Recharts, Vercel

- Shipped a production-ready survey platform end to end: drag-and-drop form builder with conditional logic, JWT + RBAC security, and an analytics dashboard built with Recharts over MongoDB aggregation pipelines.

SmaartQR — Live Emergency Response Platform

Jan 2026 – Apr 2026

React.js, TypeScript, Tailwind CSS, REST APIs — live at [smaartqr.com](#)

- Built the responsive React / TypeScript UI for a QR-based platform that routes people to verified Police, Ambulance, Fire, and Civic services in seconds, optimizing the mobile-first scan-to-service flow for time-critical use.

EDUCATION & TRAINING

B.Tech, Electrical Engineering — Galgotias College of Engineering and Technology

2016 – 2019

Diploma, Electrical Engineering — Utkalmani Gopabandhu Institute of Engineering

2013 – 2016

Full Stack Web Development Training — JSpiders, Bangalore

Sep 2022 – Jul 2023

Intensive program covering Java, JavaScript, React, SQL, and REST API development, with a full-stack e-commerce capstone.

2019 – 2022: Prepared for national-level government examinations before committing full-time to software engineering.

CERTIFICATIONS

- Full Stack Generative and Agentic AI with Python — Udemy (2026)
- TypeScript: The Complete Developer's Guide — Udemy (2024)
- React JS Masterclass: Zero to Job Ready — Udemy (2023)
